

Adoption roadmap worksheet (Session 5)

Codebase: _____ Current standard flag: _____ Target: _____

Tier 1: mechanical, zero risk (this month)

Change	Where (files/modules)	Owner	Done
make_unique / make_shared for every new [[nodiscard]] on value-returning functions Structured bindings for pair/tuple returns string_view at read- only boundaries optional for sentinel returns using over typedef Defaulted operator<=> replacing hand- written comparisons scoped_lock for lock_guard; jthread for thread (check the loop reads its stop token) Run clang-tidy modernize-* and triage			

Tier 2: interface changes (this quarter)

Change

span for buffer parameters

expected for error-returning functions

Concepts on public templates

std::format / print replacing printf/iostream

constexpr lookup tables (CRC, sensor table)

Projections and ranges:: algorithms replacing comparator lambdas

Tier 3: architectural (evaluate)

Change

Ranges pipelines

stop_token cancellation and semaphore queues

Coroutines (generator, async)

Modules
